

Presents the Excavator and Backhoe

Attachments,

"Stag Bucket"
Patent Pending TM

*Staggered Tooth
Angled Edge
for high penetration and
concentrated breakout force*

*Provides digging advantage
for tough material applications
such as shot rock, coral, frost,
stratified materials,
caliche, shale
and highly compacted materials.*

*Your excavator will have improved penetration,
applying the maximum breakout force individually to each tooth,
using our patent pending "Staggered Tooth" technology*

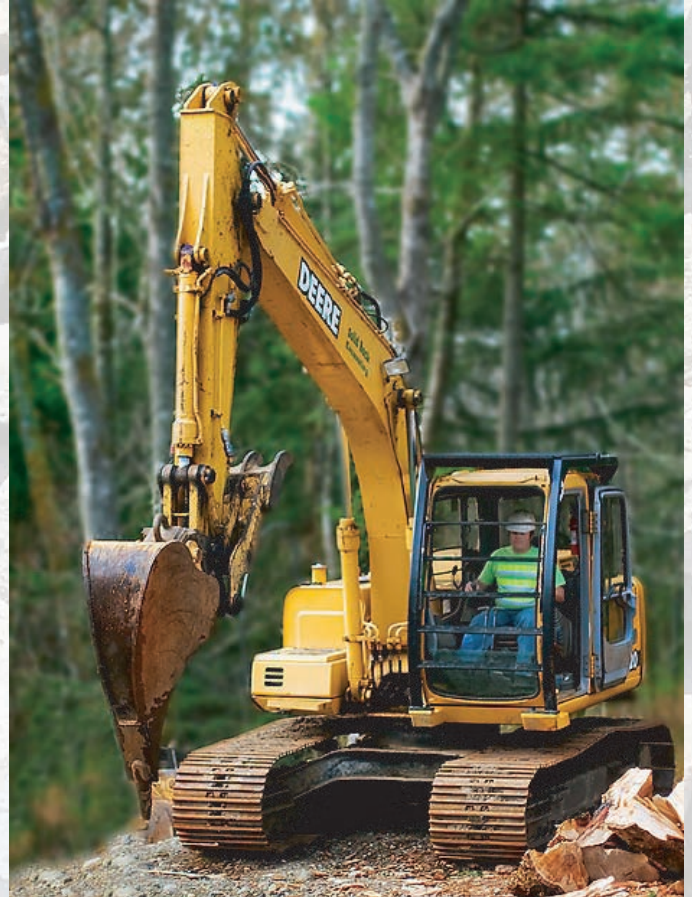

Presents the Excavator and Backhoe

Attachments,

"V-Raptor Bucket"

US Patent # 7,992,329

TM

*effective ripper
facilitates prying
great for stump ripping
ripper / bucket combination
creates clean V shaped trench
cradles boulders and stumps easily
reduces amount of rock to be ripped
reduces required backfill amount*

*Highest quality manufacturing in USA,
built to OEM specifications
to fit any brand excavator.
Thick Hardox 400 steel construction
with replaceable tooth*

The "V-Raptor Bucket" is a ripper / bucket combination for excavators and backhoes that allows the operator to easily rip rock, coral or frozen ground with the maximum breakout force, pry out and carry stumps or cradle boulders, rip a clean narrow V trench for laying utilities, plus scoop and load material, allowing the operator to own a ripper plus be able to scoop and remove ripped debris without requiring the tool or machine change to use another bucket.
